Project Proposal: Aul Compendium

I'll say up front, I don't have the most ambitious of ideas as far as this project for the month, but I guess it's about time I call upon one minor idea I have been meaning to eventually work on. I have a novel series that is currently in the works but I had planned on creating a compendium of information based on the novel's universe. Within said universe, it's known as the Aul (pronounced "all") Compendium, a tome of knowledge that can be compiled by anyone and fact checked by anyone. It's portable and wirelessly updated constantly, day in and day out. As far as developing the project, I already have my github commands set up, ReactJS and SASS are installed so I can begin coding at a moment's notice. As far as the visual presentation, I'm hoping to give it sort of a digital book sort of motif; like a book of knowledge from an old civilization that was more advanced than ours, or something along those lines. The world that this novel takes place in is shrouded in greenery so hopefully I can give it a natural-technology sort of feel to it visually.

Mobile Ver: <https://marvelapp.com/55a7177>

*Ran low on thoughts for the mobile version early on. The actual project will help me figure out more options and such I think.
